

FBI Internship
Sahil Patel

ABSTRACT

Write an abstract for your project.

Introduction

The FBI is one of the key organizations in charge of protection of the United States and its people. With a passion for public service, Internship at the Federal Bureau of Intelligence will provide me invaluable experience in law enforcement as well as help flourish skills for a future career at the FBI or another security agency. Currently the main issues the FBI deals with are threats in cyber security and a lack of language fluency(FBI 2020). With a background in Computer Science and having experiences in multiple languages, both speaking and coding, I believe I could be an asset in a tech related field in the FBI. With technology evolving every day, it is imperative that the FBI can continue to keep up with the growing field in order to provide the best homeland security for the American people. As technology grows so does cyber crime, with Illinois alone a “ number of victims at 14786...”(FBI Springfield 2022). Being able to work in this growing field, while also pursuing my own personal ideals, makes an internship at the FBI a top priority for me.

Internship description

Working in the tech field with the FBI would allow me to be able to learn hands-on how our country is protected. In addition to cybersecurity, being able to help prevent cybercrime, domestic terrorism, and corruption would be something I would like to dedicate my career to. This internship is located in Washington DC and will take place over the summer of 2025 for 6-8 weeks. I would spend these weeks shadowing a professional in a specific field I am interested in working in, while also expanding on my own ability in data management, collecting data, preservation of data, and maintaining system infrastructure. Specifically I can work on foreign cases involving languages like Hindi and Gujarati, providing an understanding of the languages that is likely unique to the team. In addition to tech related work, there are also expectations in customer service which I am comfortable with due to my experience in customer service both through computers and face to face, as well as my experience in multiple languages including English and Hindi.

Conclusion

This FBI internship would provide me the ability to develop my skills and give me first-hand experience in a field that I hold passion in, both in tech and my life goals. I would be able to help protect others in the country while also getting crucial experience in tech by working with professionals, allowing me to keep up with the growing market and technology that comes every day. I believe I have the technological skills and relevant customer service experience to be an asset to the Federal Bureau of Intelligence, and I believe the FBI and the work it provides would be a strong mentor for me in my future in this industry.

Author Bio

I am a Computer Science student at the University of Pittsburgh. I am currently in my junior year of education. My coursework has helped me develop skills in the tech field, including courses such as Data Structures and Algorithms, Computer Organization and Assembly Language, and Systems Software. In addition, my work with Eufinity, an online Mental Health company, has provided me with experience working with multiple team members in a fast paced environment where I use skills including but not limited to: installation, troubleshooting, maintenance, and advising. I also have experience in multiple different coding languages including Java, C#, C, and Python as well as experience with HTML and CSS.

1. Conjecture- This proposal seeks to earn an internship for the FBI, particularly in the computer science department.
2. Definition-Specifically, this internship will develop my skills as a computer science student.
3. Quality- This internship is important because it allows me to pursue a goal in improving my tech skills while also following my personal values.
4. Policy-Upon gaining this internship, I will gain first hand-experience in dedicating my career to the protection of others.
